PROJECTS

E-Commerce Platform

Web Application
A fully functional online store with payment integration using React and Node.js.

Task Management API

Designed a RESTful API to manage and track daily tasks for users.

OBJECTIVE

A Full-Stack Software Engineer Capable of building modern web applications using React, Angular, Next for the front end, and Ruby, ruby on rails, node, and express for the backend and robust data management tools such as MongoDB, Postgres, SQL, and finally DevOps using GitHub (CI/CD)

EXPERIENCE

Software Engineer Intern

Tech Solutions

April 2026 - Present

- Developed an e-commerce platform using React and Node.js.
- Collaborated within a team to create a task management API.
- Implemented CI/CD pipelines using GitHub Actions for project automation.

Software Developer

Freelance Web Development Projects

June 2025 - November 2025

- Created user authentication and data handling with MongoDB.
- Optimized backend performance for faster response times.
- Documented API endpoints for user clarity and ease of use.

VOLUNTEER WORK

Coding Mentor

Local Youth Coding Camp

January 2024 - June 2024

- Guided students in basic programming concepts.
- Helped develop a group project for local community.
- Assisted with planning and organizing coding workshops.
